State	N/A	N/A	N/A	N/A	N/A	N/A

Performance Category Explanations

PROGRESS

Median student Growth Percentile

- The Median Student Growth Percentile is the median growth percentile of all students in a given school, where the student growth percentile measures individual student growth on the CMT relative to a student's academic peers
- The Student Growth Percentile is calculated based on at least two years of consecutive CMT scores, therefore the school Median Student Growth Percentile includes only the growth of students who have taken the CMT in the district for at least the previous two years
- What does it mean? Students in a school with a Median Student Growth Percentile of 68 grew, on average, as well or better than 68% of students in the district

PERFORMANCE

% At or Above Proficient OR % At or Above Goal

- The % of students at or above proficient or goal is the percent of students in grades 3-8 within a given school who scored proficient, goal, or advanced (% At or Above Proficient) or goal or advanced (% At or Above Goal) on the CMT in a given subject

STUDENT ENGAGEMENT

% Days Attended (Attendance Rate)

- The Attendance Rate is calculated as the 'Number of Student-Days Attended' divided by the 'Total Number of Student-Days' in a year

TCRS

- The Teacher Child Rating Scale is a survey given to K-5 teachers asking them to rate each of their students on key dimensions of behavior and engagement, including Behavior Control, Task Orientation, and Peer Social Skills
- School and District TCRS scores are the sum of the percent of students rated as competent and the percent of students rated as highly competent in each dimension
